Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S Patent No. 6,241,110 to Hakim.

Hakim discloses an infant pacifier comprising: (a) a guard assembly (shield 30) for engaging the infant's face to prevent the pacifier from being accidentally swallowed or inhaled by the infant, said guard assembly comprising a generally U-shaped body constructed from a semi-rigid material (Column 3 lines 17-31) and having a front surface, a back surface, a bottom portion and a generally concave upper portion, said upper portion being constructed of a soft flexible material (Column 3, lines 47-51); and (b) a nipple (FIGS. 3-9) extending outwardly from said front surface of said guard, said nipple having an axial centerline concentric with said rounded bottom portion of said guard; further including a gripping handle (FIG. 13) extending outwardly from said back surface of said guard; wherein said nipple includes a bulbous forward portion and a rearward open portion (FIGS 3-9); wherein said body comprises a laminate construction comprising a first semi-rigid material and a second soft material affixed to said first semi-rigid material (Column 3. lines 17-

Column 4 line 10); wherein said first material comprises a substantially rigid plastic material and said second material comprises a soft, flexible silicone material (Column 3 lines 17-31 and 48-58); wherein the generally U-shaped body is provided with a pair of oppositely disposed openings (FIG. 13).

3. Claims 1-12 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent No. 6,695,869 to Fitzpatrick et al.

Fitzpatrick discloses an infant pacifier comprising: (a) a guard assembly (shield 200) for engaging the infant's face to prevent the pacifier from being accidentally swallowed or inhaled by the infant, said guard assembly comprising a generally U-shaped body constructed from a semi-rigid material (substrate 20) and having a front surface, a back surface, a bottom portion and a generally concave upper portion, said upper portion being constructed of a soft flexible material (substrate 30); and (b) a nipple (nipple 40) extending outwardly from said front surface of said guard, said nipple having an axial centerline concentric with said rounded bottom portion of said guard; further including a gripping handle (handle 60) extending outwardly from said back surface of said guard; wherein said nipple includes a bulbous forward portion and a rearward open portion (FIG 3); wherein said body comprises a laminate construction comprising a first semi-rigid material and a second soft material affixed to said first semi-rigid material (Column 2 lines 43-51); wherein said first material comprises a substantially rigid plastic material and said second material comprises a soft, flexible silicone material (Column 2 lines 43-51); wherein the generally U-shaped body is provided with a pair of oppositely disposed openings (FIG. 2).
